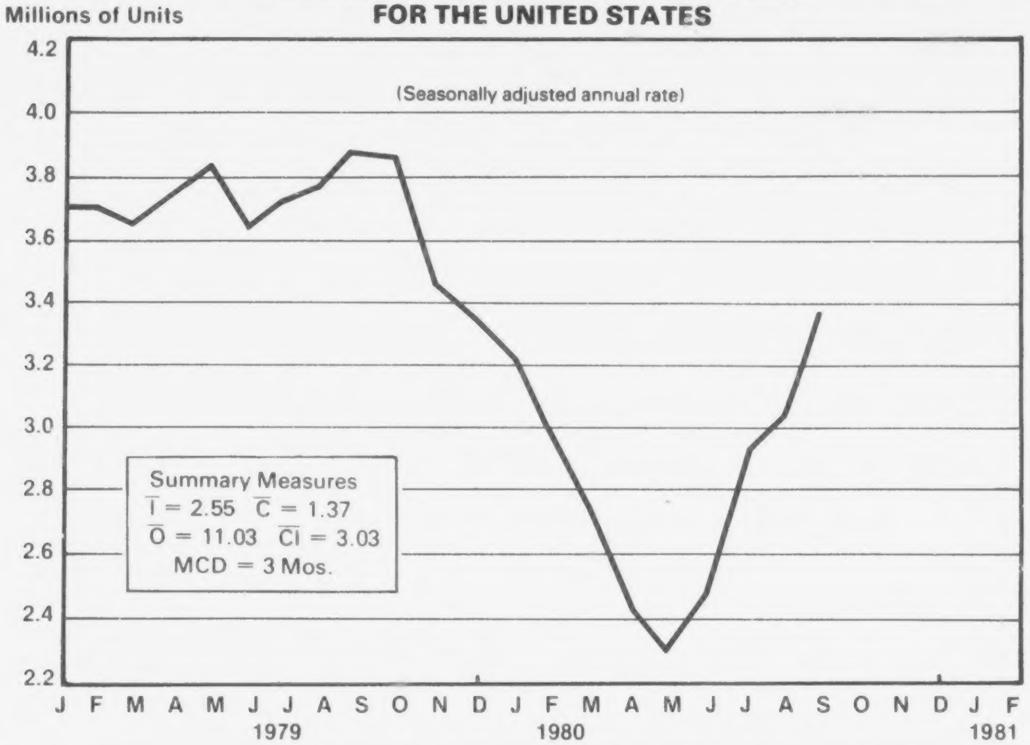
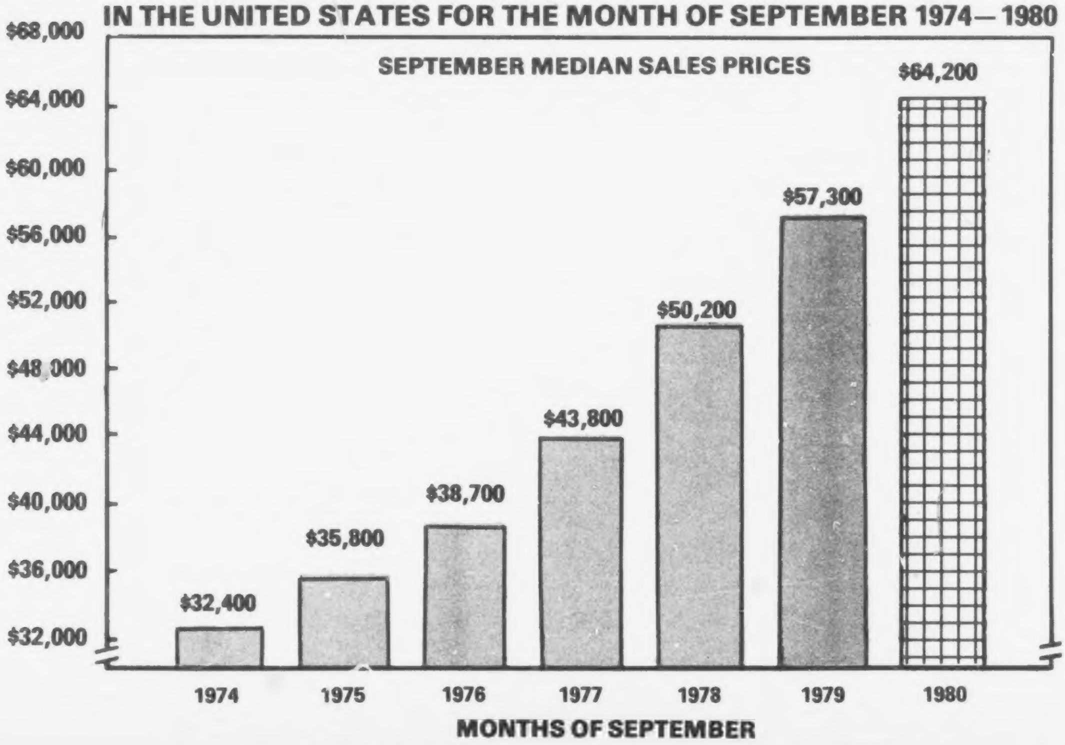
EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF SEPTEMBER 1974—1980



Copyright ©1980 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication 1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage 2. Each month the REALTORS®' Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1979 data on over 600,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions 4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	.14	South	.32
North Central	.30	West	.24

Sales Volume 6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price 9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted*.

Seasonal Adjustment 13. Volume statistics are seasonally adjusted using the X-II Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation—the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1980)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $24 to members of the NATIONAL ASSOCIATION OF REALTORS® and $36 to nonmembers.

Questions concerning this report should be directed to the NATIONAL ASSOCIATION OF REALTORS®, Economics and Research Division, 925 15th Street, N.W., Washington, D.C. 20005 (202) 223-6270.

existing home sales

Sales Volume in September

Resale activity continued to increase during the month of September despite the run-up in mortgage interest rates. Nationwide there were 3,380,000 existing single-family homes sold in September on a seasonally adjusted annual rate basis. This marks a gain of 11.6 percent over the August level and is the fourth consecutive monthly advance in sales activity since the resale market hit bottom in May.

EXISTING SINGLE-FAMILY HOME SALES
FOR THE UNITED STATES
(Seasonally Adjusted Annual Rates)

		United States	Percent Change Month Ago
1980:	Apr	2,420,000	–12.0
	May	2,310,000	– 4.5
	Jun	2,480,000	7.4
	Jul	2,920,000	17.7
	Aug	3,030,000	3.8
	Sep	3,380,000	11.6

The sales gains during September were widespread. All of the regions of the country experienced increases in activity over their August levels and sales are now considerably above their midyear lows.

Sales Price in September

Home prices took their normal seasonal drop in September as the median price of an existing home declined by $700 to $64,200 nationwide. However, prices of resale properties during the month were still 12 percent greater than in September of last year.

Three out of the four regions of the country experienced rapid double-digit increases in selling prices over the past 12 months. The median price of a resale property in the Northeast rose by 16.6 percent over the last 12 months while typical prices in the West advanced by 14.2 percent. The South followed closely with a 13.9 percent rise since last September while the North Central region had the lowest yearly increase of 9.7 percent.

SEPTEMBER MEDIAN PRICES

	September 1980	September 1979	% Change
United States	$64,200	$57,300	12.0
Northeast	$64,600	$55,400	16.6
North Central	$53,400	$48,700	9.7
South	$60,600	$53,200	13.9
West	$91,600	$80,200	14.2

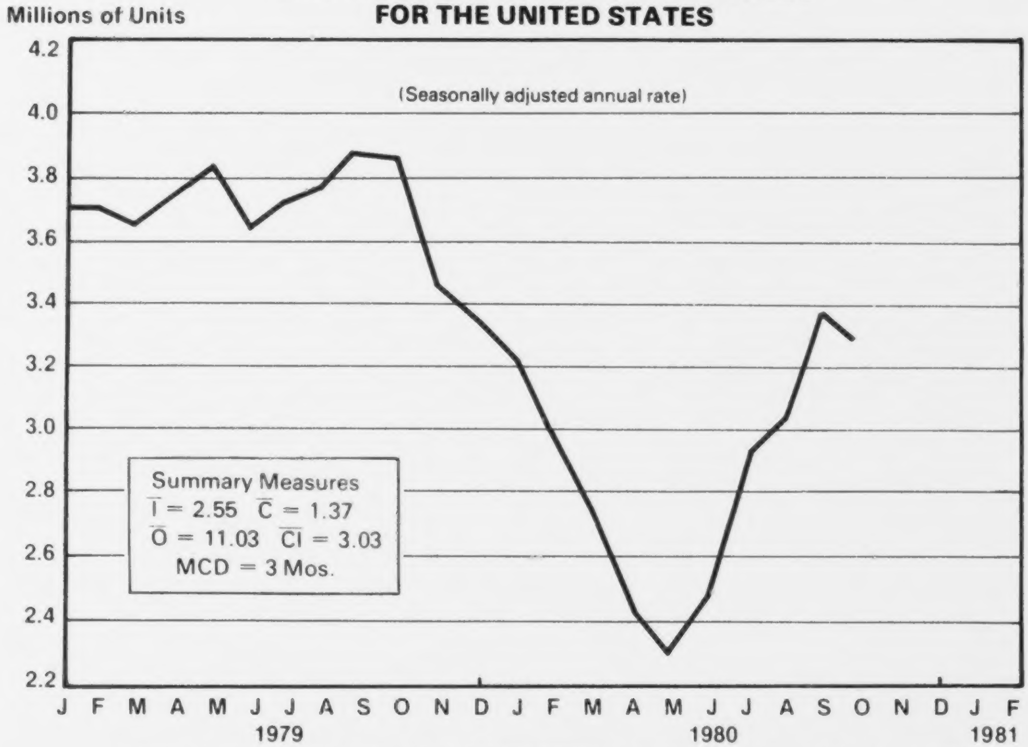
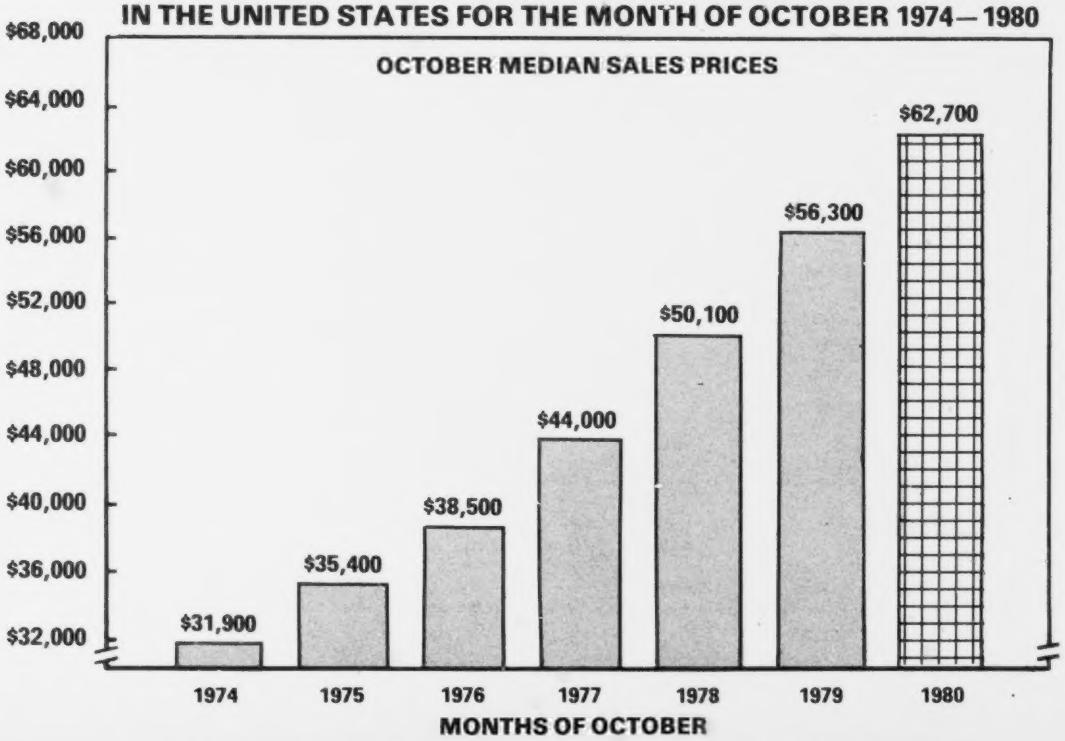
EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF OCTOBER 1974—1980



Copyright © 1980 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication 1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage 2. Each month the REALTORS®' Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1979 data on over 600,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions 4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	.14	South	.32
North Central	.30	West	.24

Sales Volume 6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price 9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted.*

Seasonal Adjustment 13. Volume statistics are seasonally adjusted using the X-II Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation — the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1980)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $24 to members of the **NATIONAL ASSOCIATION OF REALTORS**® and $36 to nonmembers.

Questions concerning this report should be directed to the NATIONAL ASSOCIATION OF REALTORS®, Economics and Research Division, 925 15th Street, N.W., Washington, D.C. 20005 (202) 223-6270.

existing home sales

Sales Volume in October

Not surprisingly, recent increases in mortgage interest rates have put a damper on the market for existing homes. After enjoying four consecutive months of generally rising activity, sales of existing single-family homes dipped 2.4 percent in October to a seasonally adjusted annual rate of 3,300,000 units.

The chilling impact of rising interest rates caused the strong upward trend in housing sales to come to an abrupt halt in every region of the country. In the Northeast region resales managed to inch a bit higher to a rate of 490,000 units in October. However, modest dips in home sales were reported in the North Central region, the South, and the West.

MONTHLY EXISTING HOME SALES

		United States		Northeast	North Central	West	South
1980:	May	2,310,000	+ 46.3	290,000	620,000	940,000	470,000

	Oct	3,300,000	− 2.4	490,000	910,000	1,290,000	610,000

Sales Price in October

Home prices typically experience a seasonal decline during September and October and 1980 is no exception. In October, the median sales price of an existing single-family home declined $1,500 to $62,700. This comes on top of a $700 decline in September. Despite these declines the median price of existing homes in the U.S. was still 11.4 percent above the same month a year ago. If the seasonal pattern holds true to form, resale prices can be expected to resume their upward climb in November.

Most of the decline in the median price for the U.S. was attributable to a large seasonal drop of $4,600 in the median price of homes in the wintery Northeast region. Other sectors of the country experienced more modest declines. In the North Central region home prices declined $1,000 to $52,400, while in the South the decline was $1,400 to $59,200 and in the West the drop was $1,400 to $90,200.

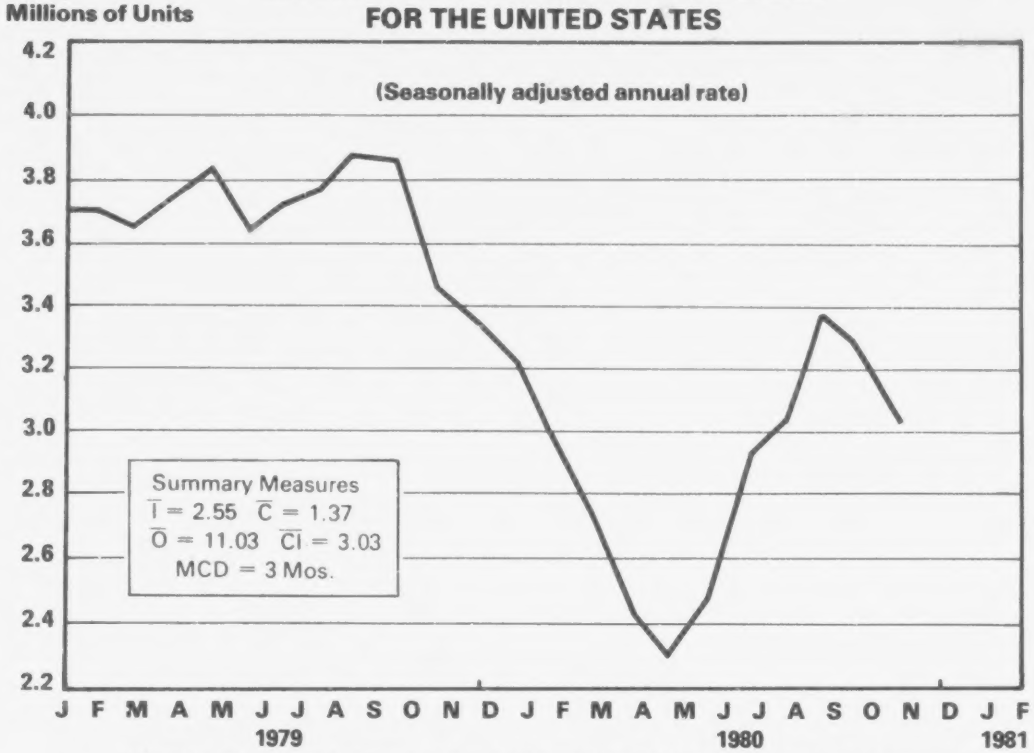
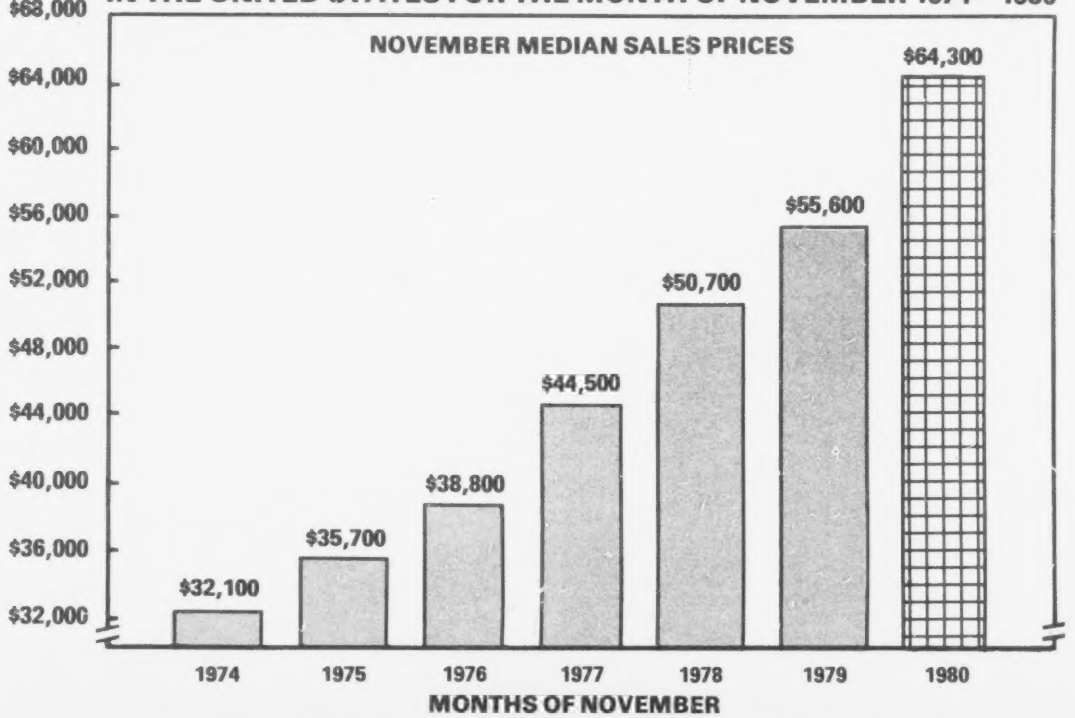
December 1980

EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF NOVEMBER 1974—1980



Copyright ©1980 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication 1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage 2. Each month the REALTORS®' Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1979 data on over 600,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions 4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	.14	South	.32
North Central	.30	West	.24

Sales Volume 6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price 9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted.*

Seasonal Adjustment 13. Volume statistics are seasonally adjusted using the X-II Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation—the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1980)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $24 to members of the **NATIONAL ASSOCIATION OF REALTORS®** and $36 to nonmembers.

Questions concerning this report should be directed to the **NATIONAL ASSOCIATION OF REALTORS®**, Economics and Research Division, 925 15th Street, N.W., Washington, D.C. 20005 (202) 223-6270.

existing home sales

Sales Volume in November

Sales of existing single-family homes continue to decline in the face of rising mortgage interest rates which exceed 15 percent in many areas of the country. In November, resale activity declined 8.5 percent to a seasonally adjusted annual rate of 3,020,000 units. This was the second consecutive month of declining sales activity, with further declines expected in the months ahead.

The affordability problem posed by mortgage rates in excess of 15 percent has curtailed home sales in every area of the country, and a majority of the transactions which are taking place are being supported by creative financing techniques. Over the past two months sales have declined 10.4 percent in the Northeast, 9.7 percent in the South, 8.7 percent in the North Central region, and a sizable 18.5 percent in the West.

Sales Volume—1980

With 11 months of sales statistics already in, we estimate that the total volume of existing home transactions in 1980 will be 2,860,000. This is the lowest level of transactions in five years and is fully one million units below the record sales of 1978 when 3,863,000 units changed hands.

Existing Single-Family Home Sales
For the United States

1975	2,452,000
1976	3,002,000
1977	3,547,000
1978	3,863,000
1979	3,701,000
1980	2,860,000 est.

Sales Price in November

The current decline has not prevented home prices from increasing another notch. In November the median price of an existing single-family home increased to $64,300, this is up 15.6 percent from the same month a year ago. Price increases were recorded in every area of the county.

Median Sales Prices

	Nov. 1979	Nov. 1980	Percent Increase
United States	$55,600	$64,300	15.6
Northeast	$51,700	$63,600	23.0
North Central	$47,500	$53,600	12.8
South	$52,200	$60,700	16.3
West	$80,300	$90,500	12.7

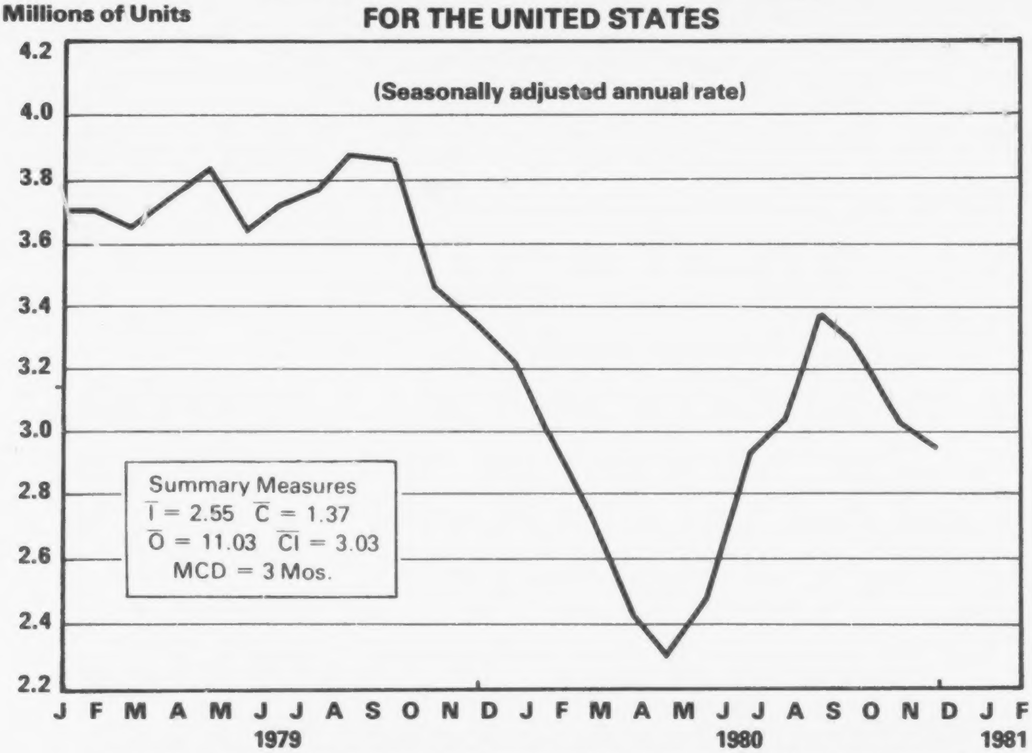
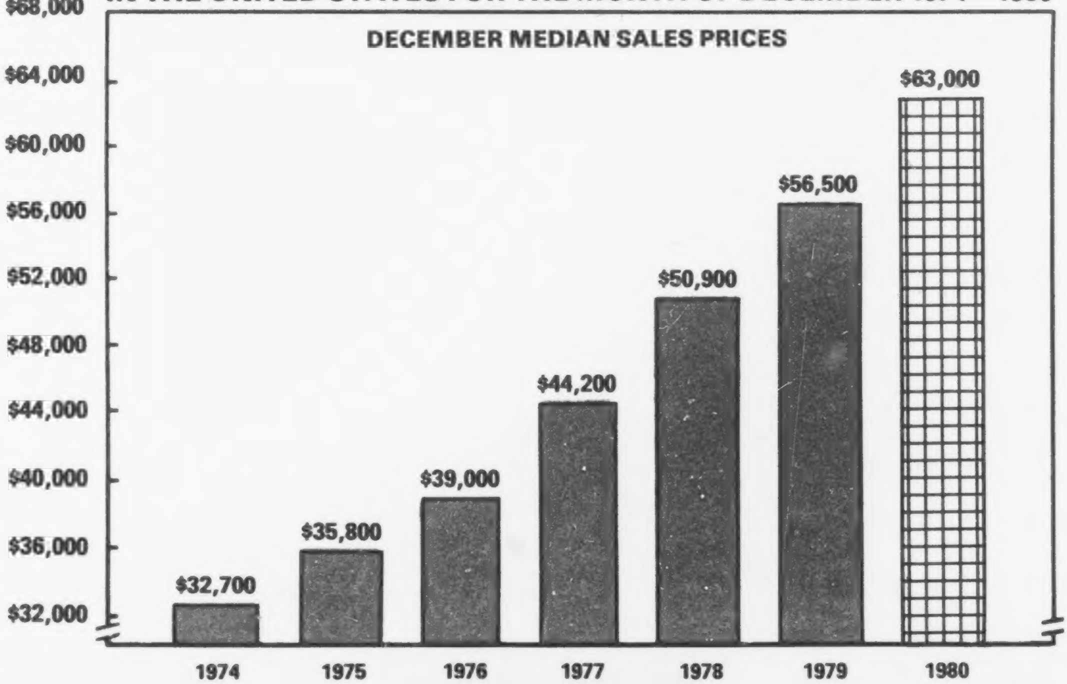
EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF DECEMBER 1974—1980



Copyright © 1981 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication 1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage 2. Each month the REALTORS® Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1979 data on over 600,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions 4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	.14	South	.32
North Central	.30	West	.24

Sales Volume 6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price 9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted.*

Seasonal Adjustment 13. Volume statistics are seasonally adjusted using the X-II Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation—the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1980)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $24 to members of the **NATIONAL ASSOCIATION OF REALTORS**® and $36 to nonmembers.

Questions concerning this report should be directed to the **NATIONAL ASSOCIATION OF REALTORS**®, Economics and Research Division, 925 15th Street, N.W., Washington, D.C. 20005 (202) 223-6270.

existing home sales

Sales Volume in December

The high level of mortgage interest rates across the country continued to have a dampening effect on the resale market. Sales of existing single-family homes declined by two percent in December to a seasonally adjusted annual rate of 2,960,000 units, the third consecutive monthly drop in resale activity.

The sales decay in December would have been sharper had it not been for the creative financing techniques utilized by real estate practitioners. Many practitioners around the country report that a majority of their sales are being made without new mortgage money from institutional lenders. The most popular techniques are assumptions, seller financing, and land contracts.

Sales Volume—1980

The resale market in 1980 recorded its poorest performance in five years, as sales of existing homes totaled 2,881,000 units. This is a drop of 22 percent from the 1979 level and is almost one million units below the record sales rate set in 1978.

Existing Single-Family Home Sales
For the United States

1975	2,452,000
1976	3,002,000
1977	3,547,000
1978	3,863,000
1979	3,701,000
1980	2,881,000

Sales Prices in December

Selling prices of resale properties showed some softness in December as the median sales price declined by $1,300 to $63,000. However, prices are still 11.5 percent ahead of the same month last year. The Northeast region had the steepest year-to-year advance of 21.4 percent, while the North Central states had the smallest at 5.7 percent.

Median Sales Prices

	Dec. 1979	Dec. 1980	Percent Increase
United States	$56,500	$63,000	11.5

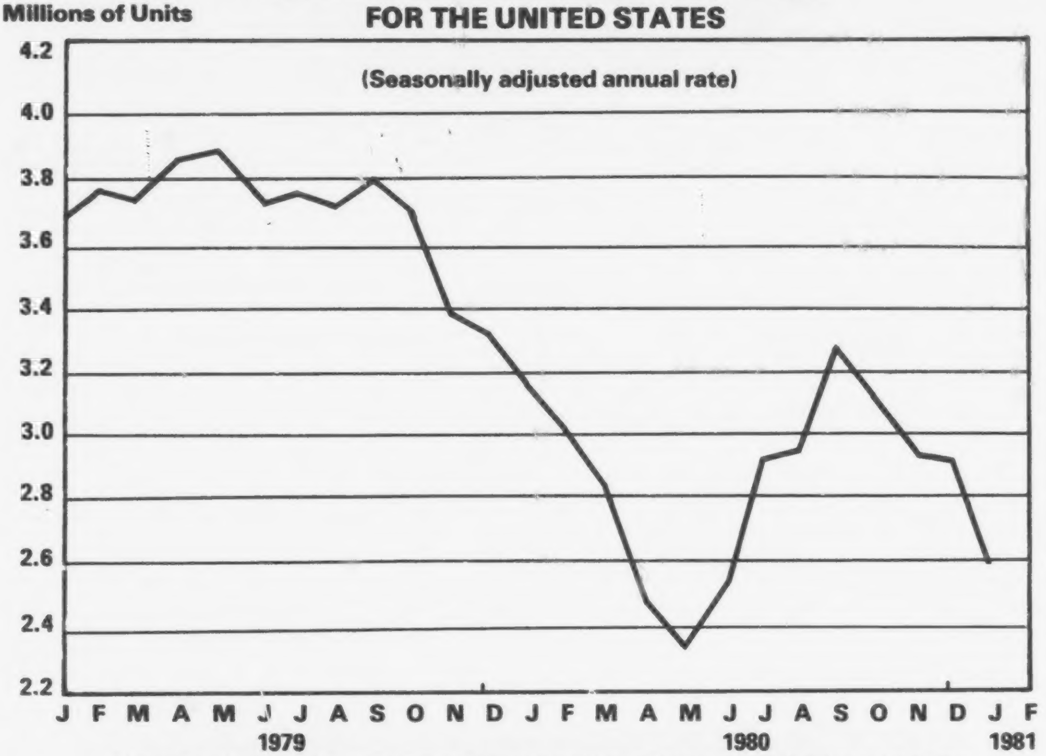
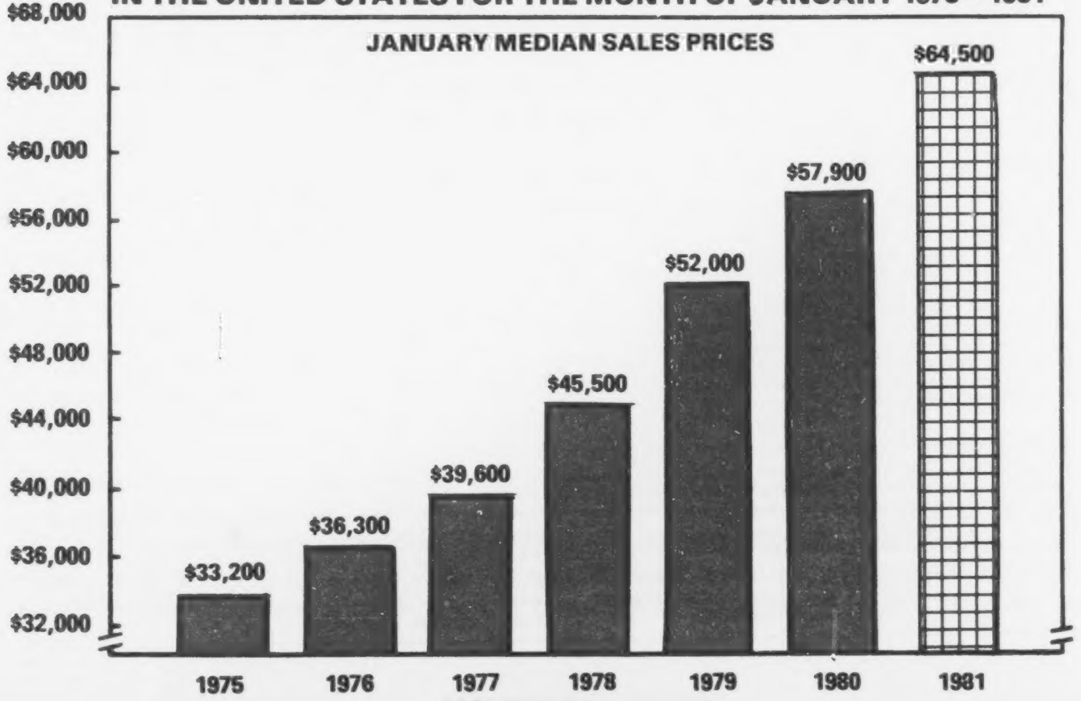
EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF JANUARY 1975—1981



Copyright © 1981 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication 1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage 2. Each month the REALTORS®' Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1980 data on over 470,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions 4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	.14	South	.32
North Central	.30	West	.24

Sales Volume 6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price 9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted.*

Seasonal Adjustment 13. Volume statistics are seasonally adjusted using the X-II Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation—the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1981)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $24 to members of the NATIONAL ASSOCIATION OF REALTORS® and $36 to nonmembers.

Questions concerning this report should be directed to the NATIONAL ASSOCIATION OF REALTORS®, Economics and Research Division, 925 15th Street, N.W., Washington, D.C. 20005 (202) 223-6270.

existing home sales

Sales Volume in January

Home Sales continue to suffer under the weight of high mortgage interest rates. Sales of existing single-family homes in January declined 11.3 percent to a seasonally adjusted annual rate of 2,580,00. This marks the fourth consecutive month of declining sales activity. In fact, during this brief period sales rates have fallen by 21 percent.

Real estate markets in all regions of the country have felt the adverse impact of high mortgage costs. Sales in January were down 22 percent in the Northeast region, 15 percent in the North Central region, and 18 percent in the West. Sales in the South experienced the smallest decline, falling just one percent.

Sales Prices in January

Selling price of resale properties regained all of the loss which occurred the preceding month. The median sales price of a single-family home in January rose $1,500 to $64,500. This is 11.4 percent higher than the same month a year ago when the median priced home sold for $57,900.

Sales Prices—1980

Over the past dozen years price appreciation on single-family homes has either matched or outpaced the overall inflation rate. However, 1980 was an exception. Nationally, the median sales price on an existing single-family home in 1980 increased to $62,200, up from $55,700 in 1979. This 11.7 percent increase compares to a 13.5 percent overall inflation rate as measured by the Consumer Price Index. Although the increase in home prices did not keep pace with inflation in 1980 this was still the sixth time in seven years that home prices increased at a double-digit rate.

Year	Median Price	Percent Increase Home Prices	Percent Increase Consumer Price Index
1974	$32,000	10.7	11.0
1975	35,300	10.3	9.1
1976	38,100	7.9	5.8
1977	42,900	12.6	6.5
1978	48,700	13.5	7.7
1979	55,700	14.4	11.3
1980	62,200	11.7	13.5

Revision Notice

Seasonally adjusted volume data have been revised for each month for the years 1978, 1979, and 1980. The unit sales and dollar volume figures which appear in this report replace all previously published data. Actual sales statistics for each month back to 1968 will be published in the upcoming edition of the Existing Home Sales Annual Report.

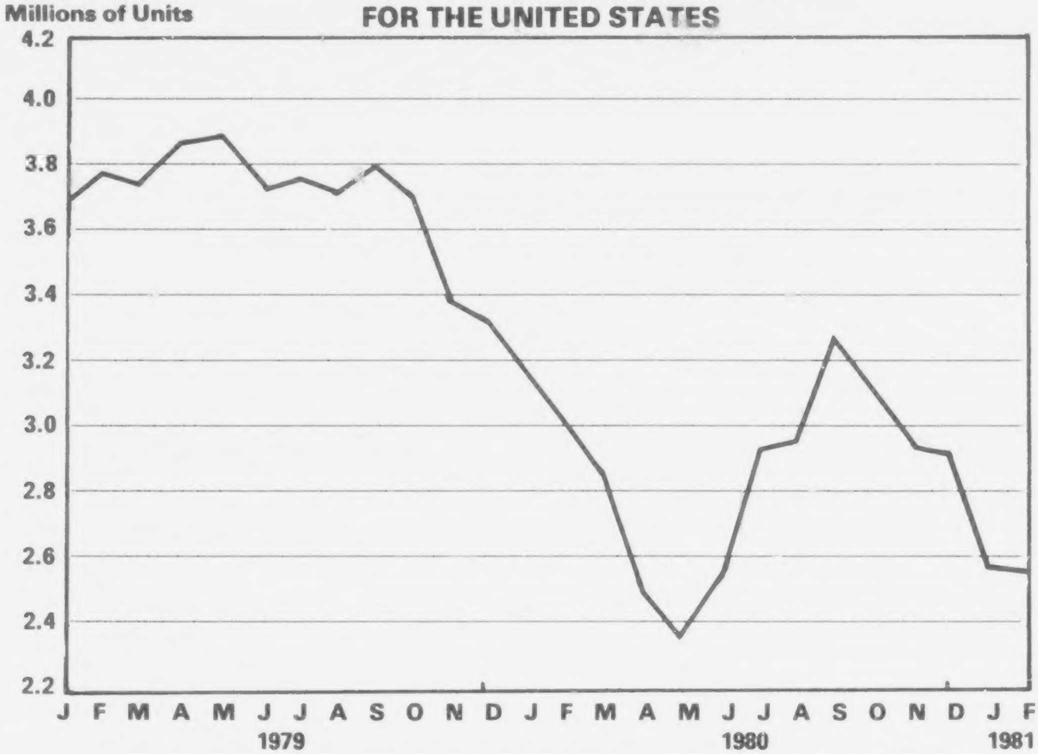
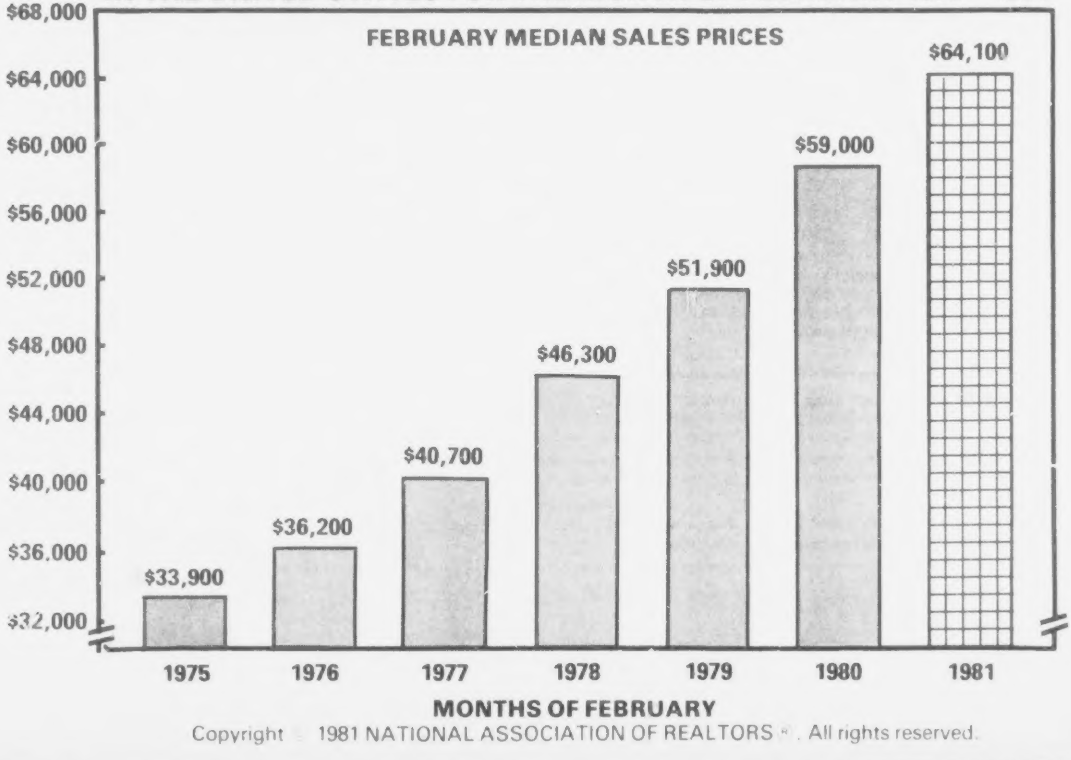
EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF FEBRUARY 1975—1981



Copyright © 1981 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication

1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage

2. Each month the REALTORS®' Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1980 data on over 470,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions

4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	14	South	32
North Central	30	West	24

Sales Volume

6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month to month fluctuations in reported volume.

Sales Price

9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted*.

Seasonal Adjustment

13. Volume statistics are seasonally adjusted using the X-11 Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation — the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1981)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" **is $24 to members of the NATIONAL ASSOCIATION OF REALTORS®** and $36 to nonmembers.

Questions concerning this report should be directed to the **NATIONAL ASSOCIATION OF REALTORS®**, **Economics and Research Division**, 925 15th Street, N.W., Washington, D.C. 20005 (202) 223-6270.

existing home sales

Sales Volume in February

The steep decline in home sales came to a halt in February. However, sales of existing single-family homes were still at a depressed level. February resales were at a seasonally adjusted annual rate of 2,560,000 units – a shade below the rate reported for January and 22 percent below the sales level of just five months ago.

January and February stack up as the slowest beginning for home sales since the credit crunch year of 1975. Home sales should begin to recover when mortgage interest rates recede from their current high level of 14½ to 15 percent. However, it is important that this recovery begin soon if the housing industry is to take full advantage of the prime homebuying season which is nearly upon us.

Sales Prices in February

With a depressed level of resales, home prices have not been advancing as fast as in previous years. In February, the median sales price of an existing single-family home actually dipped $400 to $64,100. Overall, home prices in February were 8.6 percent higher than the same month a year ago when the median priced home sold for $59,000.

Dollar Volume Drops in 1980

For the first time in the 13 years that resale statistics have been collected, the dollar volume of existing home transactions declined in 1980. The increase in home prices during the year was not enough to offset the decrease in unit sales, causing the volume of activity to slide from $237.6 billion in 1979 to $209.7 billion in 1980 – a drop of 11.7 percent.

Prior to 1980 the growth in dollar volume had been spectacular. Between 1974 and 1979 sales advanced from $81.3 billion to $237.6 billion – a threefold gain over the five year period.

Year	Dollar Volume (Billions)	Percent Change
1974	$ 81.3	–
1975	95.6	17.6%
1976	126.7	32.5
1977	169.9	34.1
1978	214.4	26.2
1979	237.6	10.8
1980	209.7	–11.7

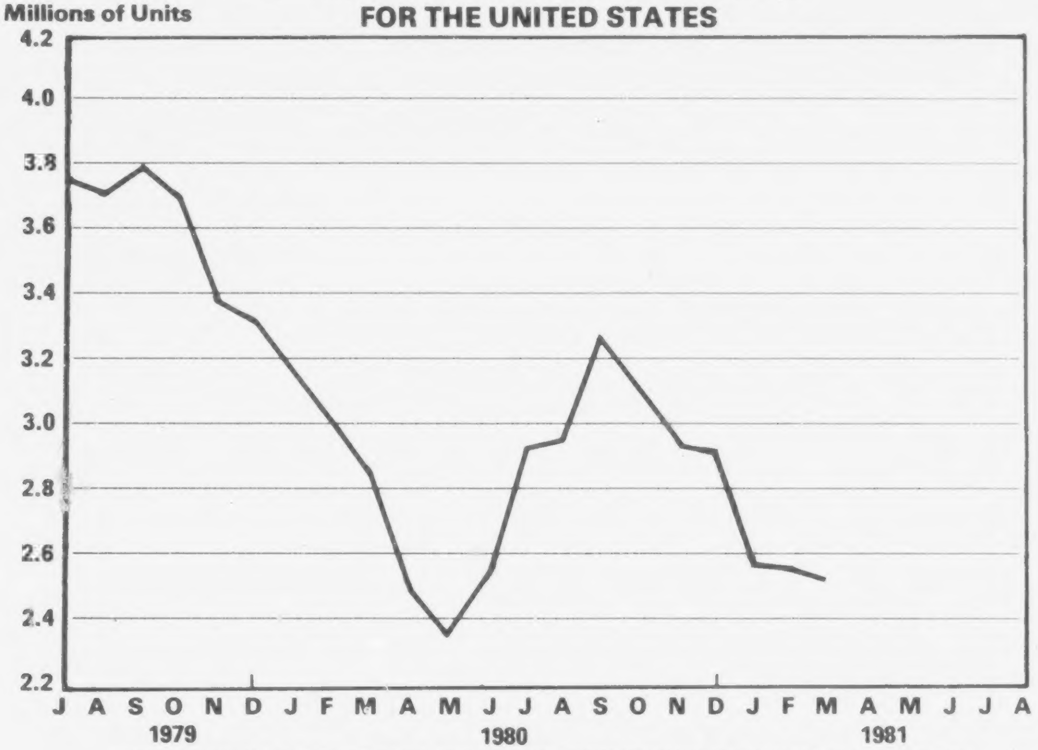
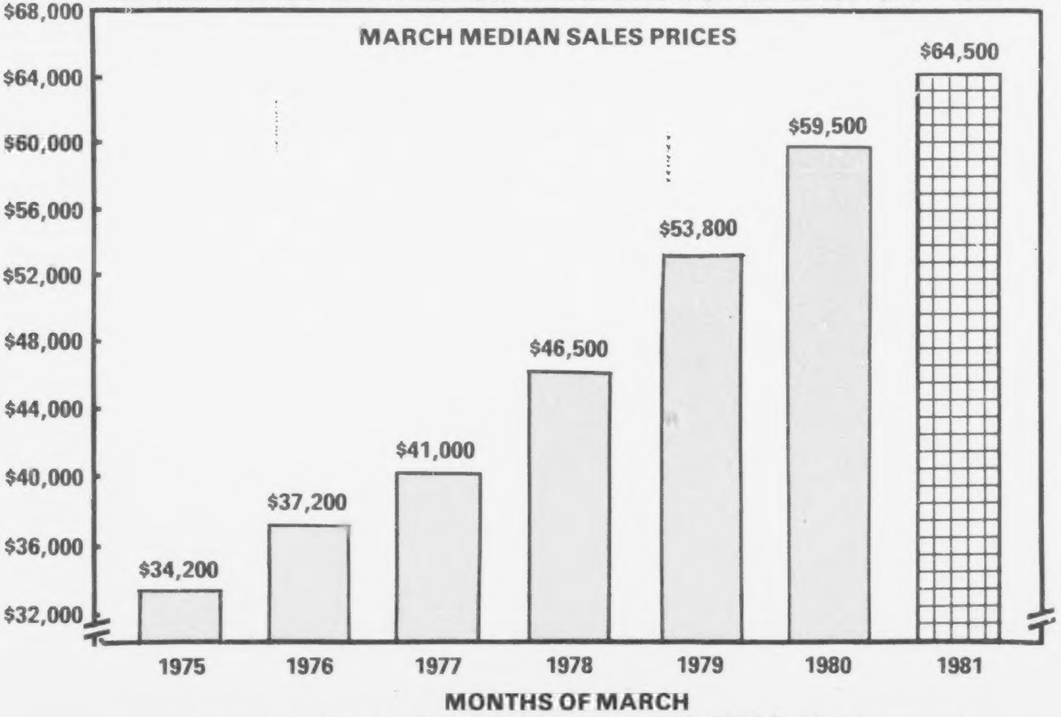
April 1981

EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF MARCH 1975—1981



Copyright © 1981 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication 1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage 2. Each month the REALTORS® Economics and Research Division receives data on existing single family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1980 data on over 470,000 existing single family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions 4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	14	South	32
North Central	30	West	24

Sales Volume 6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price 9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted*.

Seasonal Adjustment 13. Volume statistics are seasonally adjusted using the X-11 Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading day variation — the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

March 1981

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $24 to members of the **NATIONAL ASSOCIATION OF REALTORS®** and $36 to nonmembers.

Questions concerning this report should be directed to the **NATIONAL ASSOCIATION OF REALTORS®**, Economics and Research Division, 925 15th Street, N.W., Washington, D.C. 20005 (202) 223-6270.

existing home sales

Sales Volume in March

Housing markets remain in the doldrums. Sales of existing single-family homes declined for the fourth consecutive month in March to reach a seasonally adjusted annual rate of 2,520,000 units. This is fully 37 percent below the peak rate achieved in November 1978 and is just 170,000 units shy of the cyclical low point reached less than a year ago.

The protracted housing recession was 28 months old in March making it not only the steepest but also probably the longest housing cycle (peak to recovery) since statistics have been gathered on the resale market.

PERIODS OF DECLINE IN EXISTING HOME SALES
(Seasonally Adjusted Annual Rates, Millions of Units)

Housing Recession	Peak	Trough	Recovery to Prior Peak	Percent Decline Peak to Trough	Total Duration Peak Through Recovery
1969-1970	Dec 1968 1,710,000	Mar 1970 1,370,000	Aug 1970 1,720,000	−20 %	20 months
1974-1975	Feb 1973 2,500,000	Jan 1975 2,040,000	Sep 1975 2,600,000	−18 %	31 months
1979-1981	Nov 1978 4,020,000	May 1980 2,350,000	????	−42 % (?)	28 months so far

Sales Price in March

The affordability problem created by high interest rates is also cutting into the rate of increase in single-family home prices. In March the median sales price of an existing home rose just $400 to $64,500. This small increase was only enough to bring home prices back to where they were at the beginning of the year. Nationwide home prices have only risen 8.4 percent during the last 12 months. A resumption of the strong price appreciation experienced in preceding years is not expected to occur until mortage interest rates return to a more affordable level.

A slower rate of price appreciation is evident in most areas of the country. In fact the South is the only region in which home prices are still rising at a double-digit pace.

	March 1980	March 1981	Percent Increase
United States	$59,500	$64,500	8.4 %
Northeast	$58,400	$62,300	6.7 %
North Central	$50,500	$52,700	4.4 %
South	$54,700	$61,900	13.2 %
West	$86,200	$92,400	7.2 %

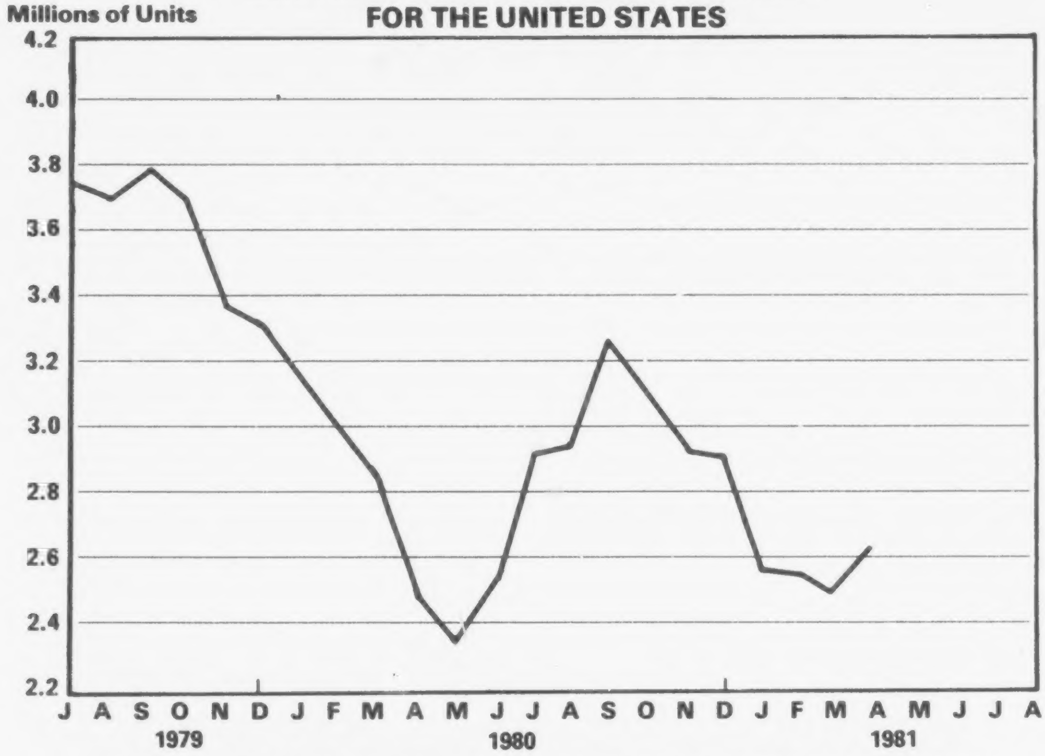
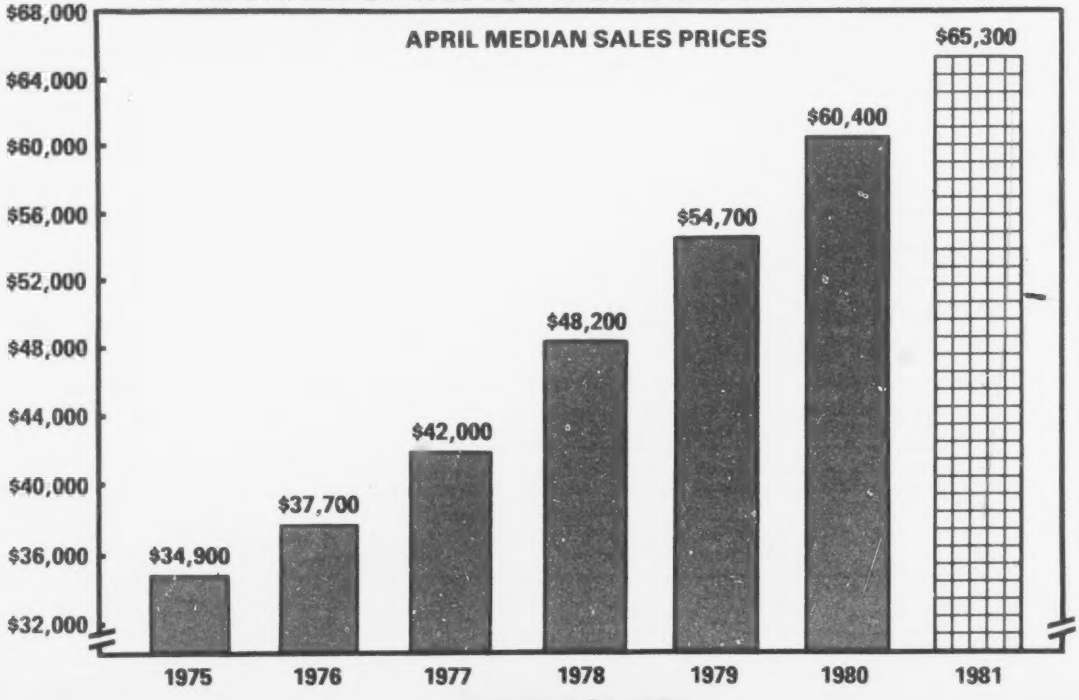
EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF APRIL 1975—1981



Copyright © 1981 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication 1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage 2. Each month the REALTORS®' Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1980 data on over 470,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions 4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	.14	South	.32
North Central	.30	West	.24

Sales Volume 6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price 9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted.*

Seasonal Adjustment 13. Volume statistics are seasonally adjusted using the X-II Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation—the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1981)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $24 to members of the NATIONAL ASSOCIATION OF REALTORS® and $36 to nonmembers.

Questions concerning this report should be directed to the NATIONAL ASSOCIATION OF REALTORS®, Economics and Research Division, 925 15th Street, N.W., Washington, D.C. 20005 (202) 223-6270.

existing home sales

Sales Volume in April

Sales of existing single-family homes rose in April ending a string of six consecutive months of generally declining activity. Resale activity in April was at a seasonally adjusted annual rate of 2,640,000 units up 6.0 percent from the preceding month. Reports that home sales have increased were received from each of the four regions of the country.

It is still a bit early to conclude that the current cycle in home sales has bottomed out. However, the modest increase in resale activity in April together with reported improvements in housing starts and housing permits do offer some encouragement.

During the first four months of 1981 just 797,000 resale transactions have taken place, making this the poorest start for the resale market since the recession year of 1975. This contrasts with nearly 1.2 million resale transactions that took place during the first four months in the peak sales year of 1978. The resale market is now in its prime seasonal months and the recovery will have to get underway fairly soon for sales to top the three million unit mark this year.

Sales Price in April

In April the median sales price of an existing single-family home increased by $900 to $65,300. This appreciation is somewhat greater than experienced in previous months so far this year, however, nationwide home prices are still just 8.1 percent above the level of a year ago.

Dollar Volume in April

Rising sales activity coupled with the price appreciation that occurred in April have pushed the dollar volume of resale activity to an annual rate of $205 billion. However, dollar volume so far this year is averaging $15 billion less than in 1980 and more than $40 billion less than in 1979. This trend has seriously crimped the earnings of real estate practitioners who specialize in residential resales.

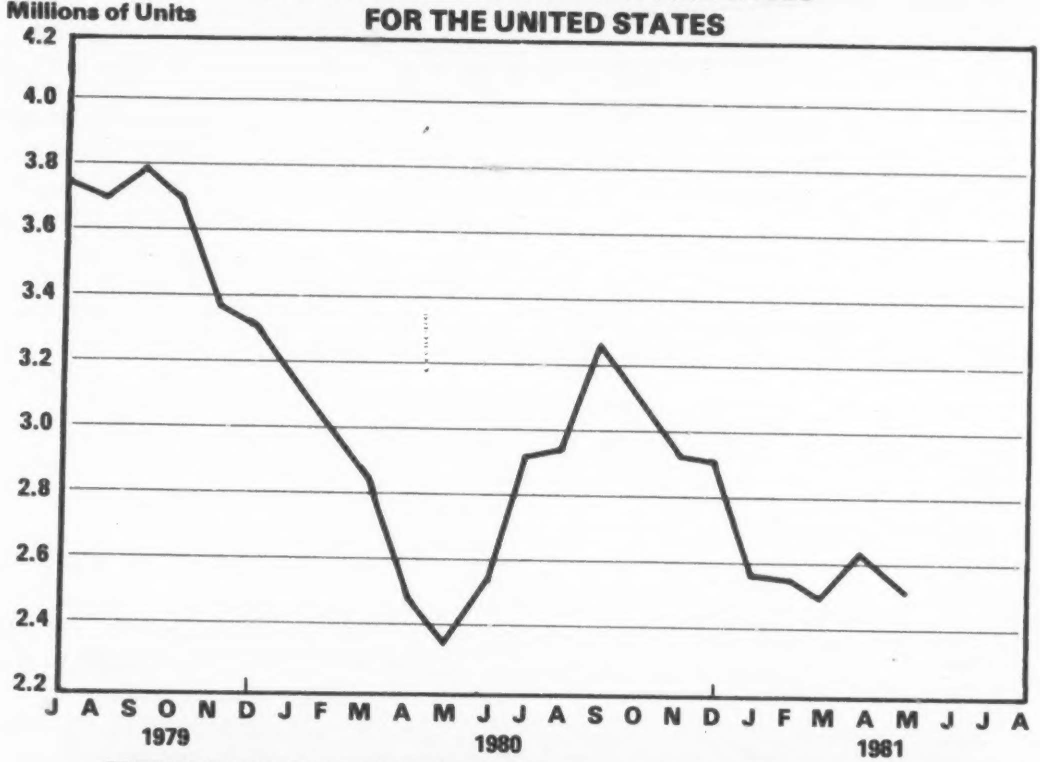
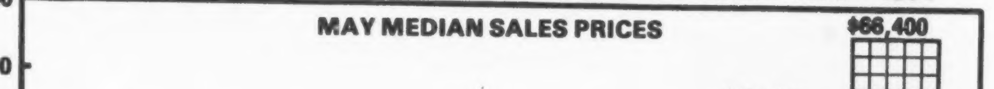
NATIONAL ASSOCIATION OF REALTORS ■ ECONOMICS AND RESEARCH DIVISION

June 1981

EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF MAY 1975–1981



Copyright © 1981 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication 1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage 2. Each month the REALTORS®' Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1980 data on over 470,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions 4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas

Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	.14	South	.32
North Central	.30	West	.24

Sales Volume 6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price 9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted.*

Seasonal Adjustment 13. Volume statistics are seasonally adjusted using the X-II Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation—the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1981)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $24 to members of the NATIONAL ASSOCIATION OF REALTORS® and $36 to nonmembers.

Questions concerning this report should be directed to the NATIONAL ASSOCIATION OF REALTORS®, Economics and Research Division, 777 14th Street, N.W., Washington, D.C. 20005 (202) 383-1000.

existing home sales

Sales Volume in May

Sales of existing single-family homes slumped further in May to a seasonally adjusted annual rate of 2,510,000 units. The monthly decline of 3.8 percent nearly wiped out the increase recorded in April.

Over the first five months of 1980, the annualized sales rate of existing homes has averaged 2,550,000. Clearly, the housing recovery will have to get underway fairly soon if resales in 1981 are to exceed the dismal sales pace of 2.9 million units recorded in 1980.

Resale activity continues at a lackluster pace all across the country. So far this year, each of the four regions have turned in sales performances that have not been seen since the credit crunch of 1975.

Sales Prices in May

In May, the median sales price of an existing home increased by $1,100 to reach $66,400. This is the largest increase experienced so far this year; however, nationwide home prices are just 8.5 percent above the same month a year ago.

Change in Reporting Procedures

In order to publish our *Existing Home Sales* report on a more timely basis, we have changed our procedure and are now computing sales and price statistics before we receive reports from all of the 142 Multiple Listing Services (MLS's) participating in our sample. Therefore, data for the most recent month represent preliminary estimates of the final statistics. Price and volume numbers for a given month are subsequently revised and appear in final form in the succeeding report. The following table indicates the small difference between the preliminary and revised numbers for the months of March and April.

Sales Volume

	Preliminary	**Revised**	**Difference**
March	2,520,000	2,490,000	-30,000
April	2,640,000	2,610,000	-30,000

Median Price

	Preliminary	**Revised**	**Difference**
March	$64,500	$64,400	- $100
April	$65,300	$65,300	-0-

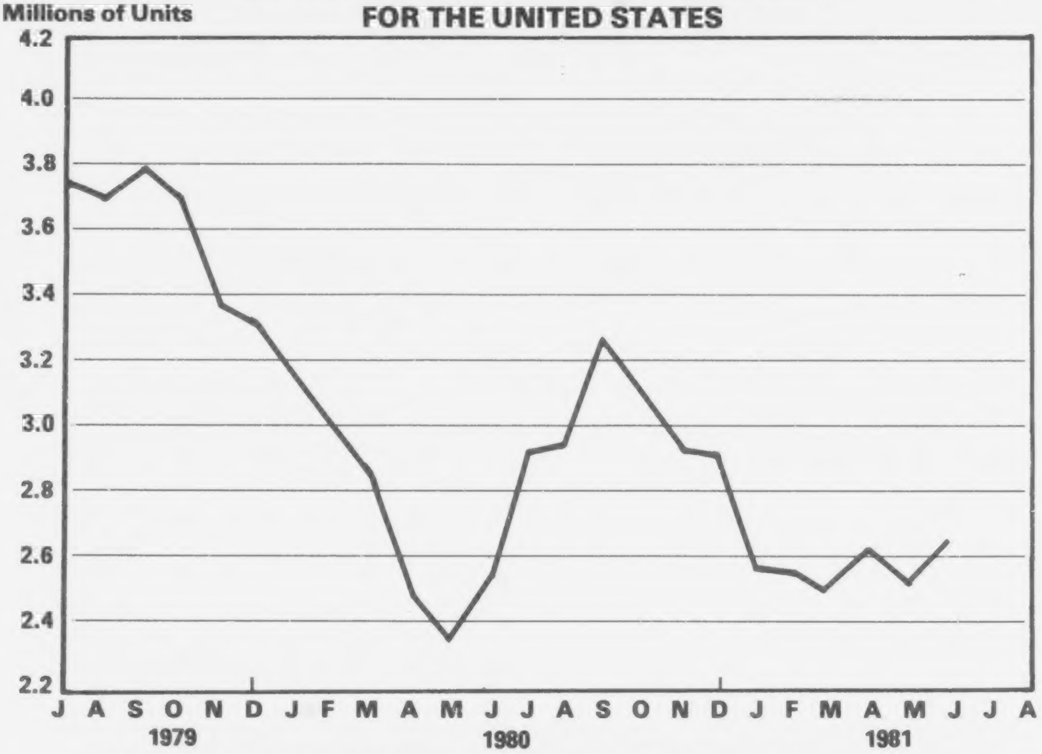
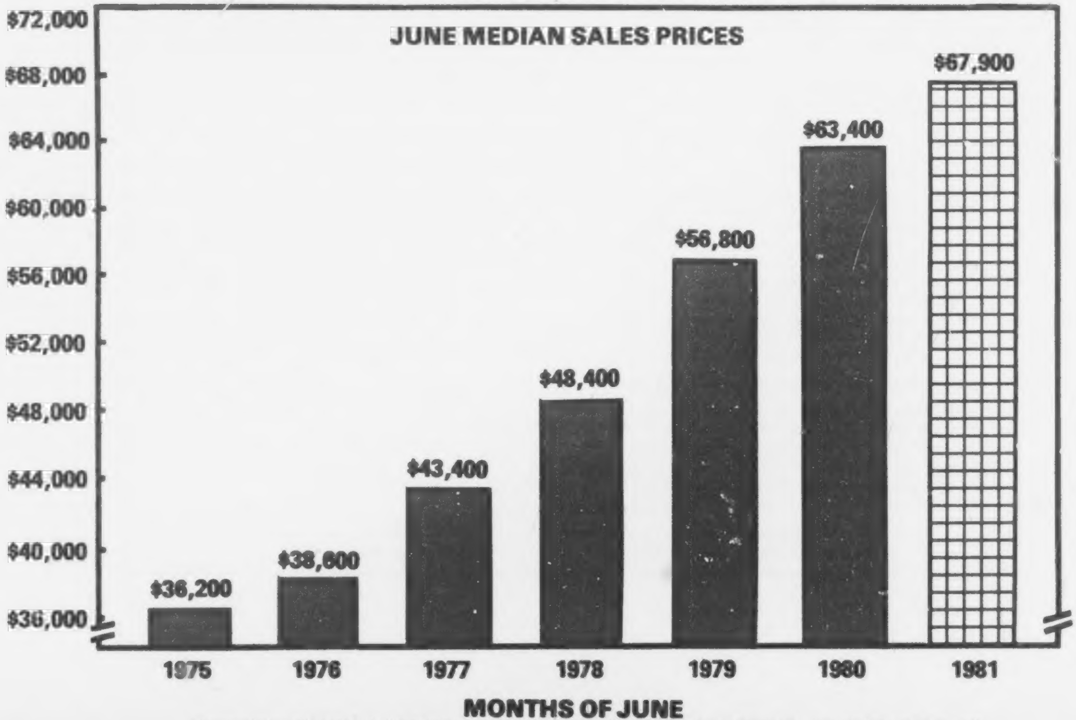
NATIONAL ASSOCIATION OF REALTORS ■ ECONOMICS AND RESEARCH DIVISION

July 1981

EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF JUNE 1975—1981



Copyright © 1981 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication 1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage 2. Each month the REALTORS®' Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1980 data on over 470,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions 4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	.14	South	.32
North Central	.30	West	.24

Sales Volume 6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price 9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a standard home. Prices are influenced by changes in cost and changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted.*

Seasonal Adjustment 13. Volume statistics are seasonally adjusted using the X-II Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation— the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1981)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $24 to members of the NATIONAL ASSOCIATION OF REALTORS® and $36 to nonmembers.

Questions concerning this report should be directed to the NATIONAL ASSOCIATION OF REALTORS® Economics and Research Division, 777 14th Street, N.W., Washington, D.C. 20005 (202) 383-1000.

existing home sales

Sales Volume in June

The severe depression in the resale market eased just a bit. In June, sales of existing single-family homes nationwide rose six percent to a seasonally adjusted annual rate of 2,650,000 units.

Despite this modest sales gain, resale activity is still 35 percent below the peak level achieved in November 1978, making this by far the worst housing slump in the 13 year history of this statistical series. Indeed, during the first half of 1981 resale activity was at its lowest level in six years. For the first six months of 1981 a total of 1,270,000 existing housing units changed hands—nearly 100,000 units below the dismal total of 1,350,000 units which sold over the same period in 1980.

Much of the June increase came from the South. As yet, there is no widespread pick-up in home sales, with other regions of the country continuing to report low levels of transactions. A substantial up-turn in resale activity will not occur until mortgage interest rates decline from their current unaffordable range of 16 to 18 percent.

Sales Price in June

High mortgage interest rates continue to dampen the rate of appreciation in home prices. The median sales price of a resale property in June was $67,900, up $1,600 from the previous month but only 7.1 percent above the price level for the same month a year ago.

The following table shows that resale prices are up around eight percent so far this year. If this trend continues this will be the first year since 1976 that price appreciation has not been at a double-digit rate. It is also important to note that the price increases in 1981 are probably overstated a bit due to the widespread use of creative financing techniques.

Percent Change from Same Month a Year Ago—

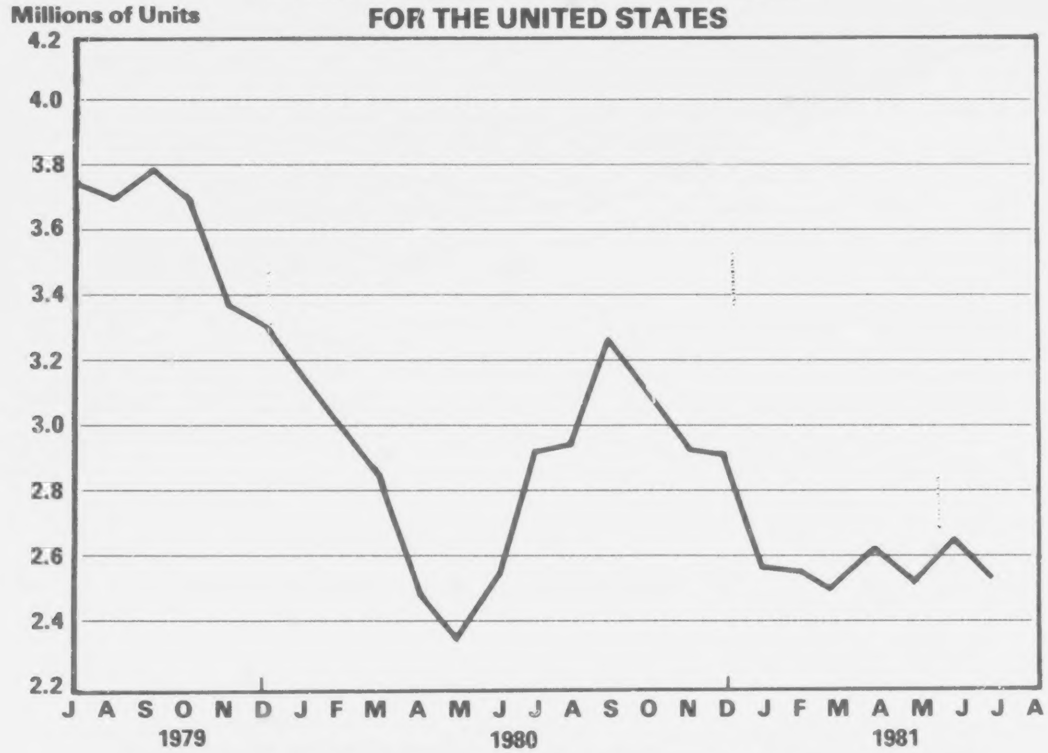
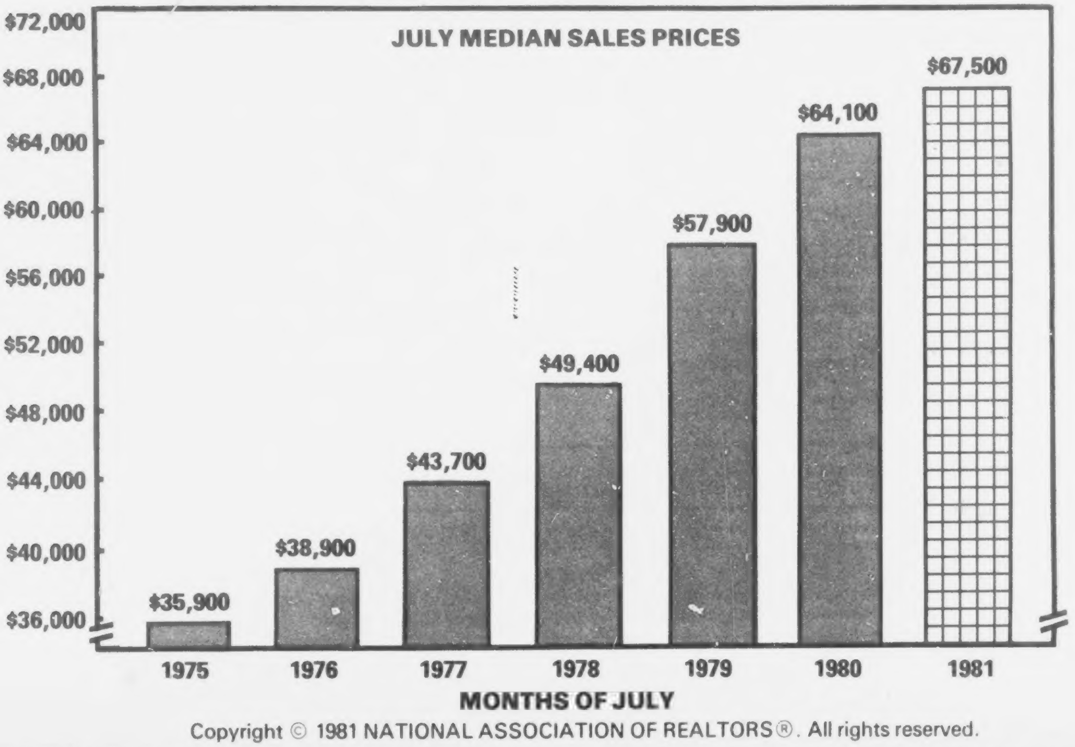
EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF JULY 1975-1981



Copyright © 1981 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication 1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage 2. Each month the REALTORS®' Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1980 data on over 470,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions 4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	.14	South	.32
North Central	.30	West	.24

Sales Volume 6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price 9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted.*

Seasonal Adjustment 13. Volume statistics are seasonally adjusted using the X-II Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation—the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1981)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $24 to members of the **NATIONAL ASSOCIATION OF REALTORS®** and $36 to nonmembers.

Questions concerning this report should be directed to the **NATIONAL ASSOCIATION OF REALTORS®**, Economics and Research Division, 777 14th Street, N.W., Washington, D.C. 20005 (202) 383-1000.

existing home sales

Home Sales in July

The recession in home sales continues. In July existing home sales slipped to a seasonally adjusted annual rate of 2,520,000 units. This is down 5.2 percent from the revised figure for June, and 13.7 percent below the sales rate for the same month a year ago.

So far in 1981 the rate of resale activity has fluctuated in the narrow range of 2.49 to 2.66 million units, with an average rate of 2.56 million units. If this trend continues the sales total for 1981 will fall well short of last year's dismal performance of 2.9 million resale transactions and would be 32 percent below the pre-recession levels of 1978 and 1979 when annual sales averaged 3.78 million units.

The total number of potential transactions lost during this recession is staggering. So far over 2.3 million home sales with a market value of $162 billion have been lost, making this recession many times more severe than either of the last two downturns.

Tight Money Periods	Duration of Sales Cycle (Peak to Recovery)	Percent Decline in Existing Home Sales (Peak to Trough)	Unit Volume of Sales Lost	Dollar Volume of Sales Lost (In Billions of Dollars)
1969-1970	21 months	– 19.9 percent	236,000	$ 5.7
1973-1975	32 months	– 18.4 percent	489,000	$ 17.4
1979-1981	33 months (so far)	– 41.5 percent	2,326,000	$162.0

Home Prices in July

High mortgage interest rates have wrung all of the price appreciation out of the housing market. Instead of the typical seasonal increase in selling prices which occurs at this time of the year, the median price of an existing home fell $200 in July to $67,500. This is just 5.3 percent above the same month a year ago. Since home prices are currently being overstated due to the pervasive use of creative financing techniques, it is safe to say that the true selling price of homes right now is certainly no higher than a year ago.

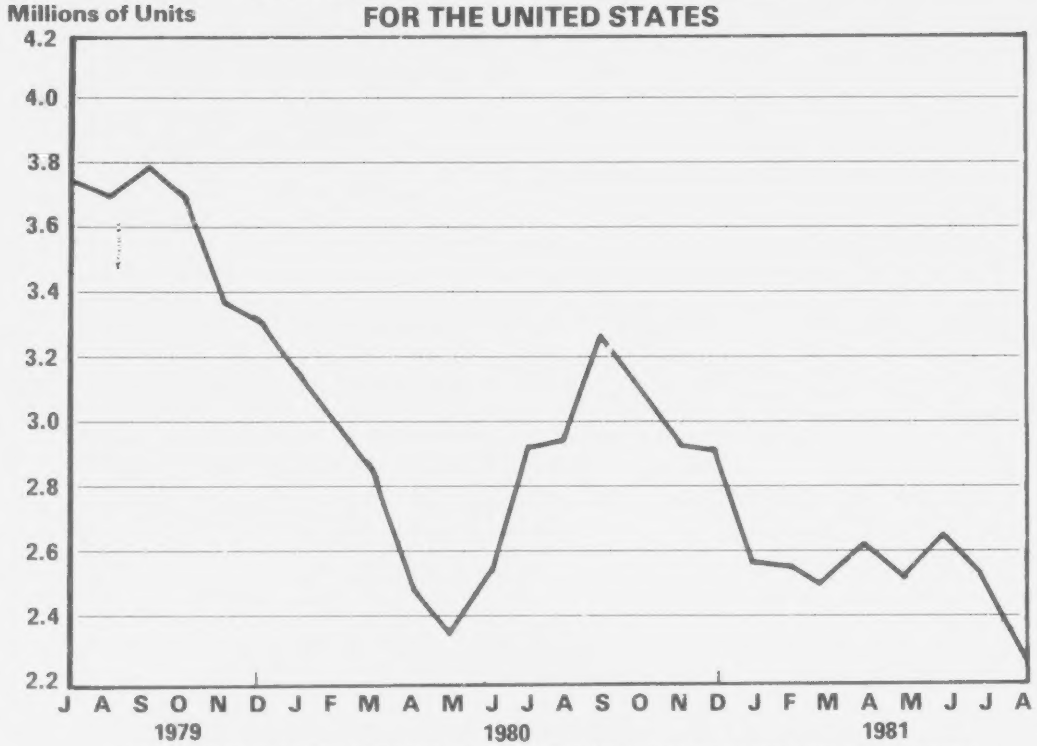
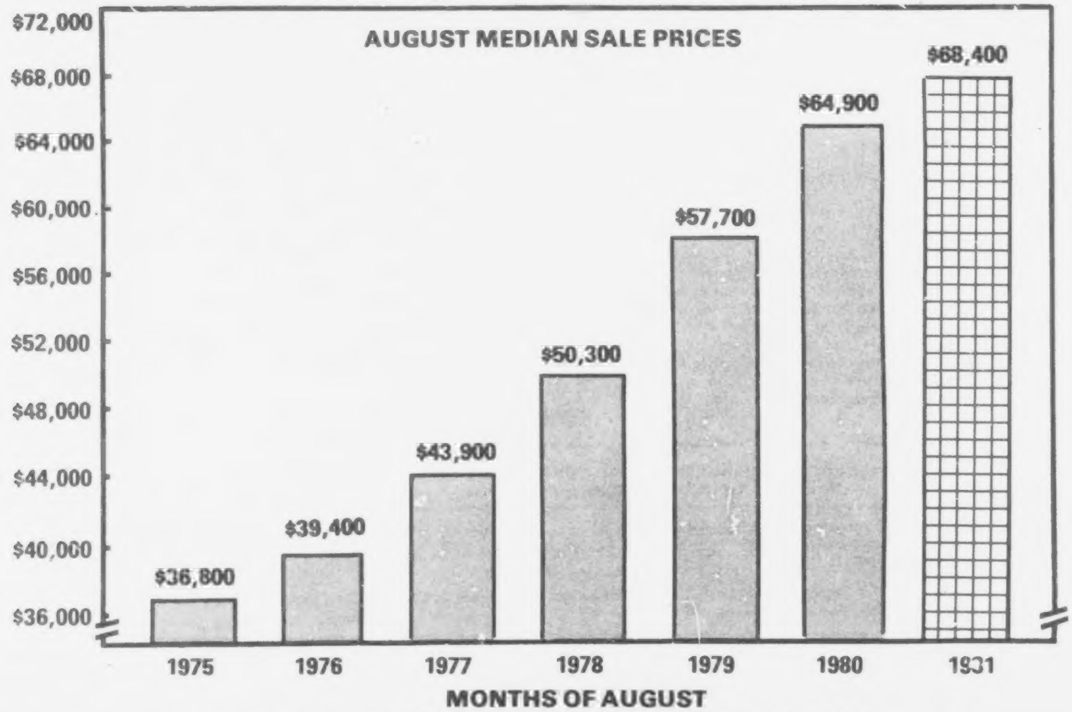
September 1981

EXISTING SINGLE-FAMILY HOME SALES FOR THE UNITED STATES



MEDIAN SALES PRICE OF EXISTING SINGLE-FAMILY HOMES IN THE UNITED STATES FOR THE MONTH OF AUGUST 1975-1981



Copyright © 1981 NATIONAL ASSOCIATION OF REALTORS®. All rights reserved.

SURVEY DESCRIPTION

Publication

1. "Existing Home Sales" is a monthly publication of the NATIONAL ASSOCIATION OF REALTORS ®. Annual and historic statistics dating back to the inception of the series in 1966 are published each year in the "Existing Home Sales Annual Report."

Coverage

2. Each month the REALTORS ®' Economics and Research Division receives data on existing single-family home sales from over 140 Boards of REALTORS ®. Participating Boards report the number of single-family sales which occurred during the month, sales prices, and number of bedrooms in the units. In 1980 data on over 470,000 existing single-family homes were received and processed.

3. Participating Boards are situated in every region of the country and provide wide geographic coverage of the existing home market. While all are located in, or adjacent to, standard metropolitan statistical areas, comparisons of their sales reports with data from the Annual Housing Survey show that, as a group, their experience is representative of the sales activity and prices that generally prevail in each region of the country.

Regions

4. Statistics on sales volume and price are published for the U.S. and for the four standard Census regions of the country. States contained in each region are as follows:

NORTHEAST
Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

SOUTH
Alabama
Arkansas
Delaware
Dist. of Columbia
Florida
Georgia
Kentucky
Louisiana
Maryland
Mississippi
North Carolina
Oklahoma
South Carolina
Tennessee
Texas
Virginia
W. Virginia

NORTH CENTRAL
Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

WEST
Alaska
Arizona
California
Colorado
Hawaii
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

5. Regional weights have been developed to represent the estimated importance of each region in the national existing home market. These weights are based on the regional distribution of owner-occupied single-family dwelling units and homeowner mobility. Weights are periodically revised to reflect shifts in regional demand. The most recent revision occurred in 1979 to reflect changes reported in the 1977 Annual Housing Survey. Weights assigned each region are:

Northeast	.14	South	.32
North Central	.30	West	.24

Sales Volume

6. Estimated total sales volume for each region is computed by using a constant factor to blow up the reported sales of participating REALTOR ® Boards. Regional factors were developed by analyzing the relationship between reported Board sales and measures of total market activity derived from special computer runs from the 1973 and 1974 Annual Housing Survey tapes.

7. Regional sales are then aggregated to yield national sales volume. Because of the method of computation, regional figures will not always total to the U.S. statistic. Such differences are due entirely to rounding.

8. In the main, a transaction is reported when the sales contract is signed, but a number of Boards report "closings." To the extent "closings" are contained in this series, they introduce a "distributive lag" effect which tends to smooth out month-to-month fluctuations in reported volume.

Sales Price

9. Average (mean) and median sales prices are computed for the U.S. and each region of the country. Because of the nature of the distribution of home sales prices, the average (mean) sales price is higher than the median price.

10. Movements in sales prices should not be interpreted as measuring changes in the cost of a *standard* home. Prices are influenced by changes in cost *and* changes in the characteristics and size of homes actually sold.

11. Due to the increasing relative importance of homes selling for $90,000 and over in recent years, additional price classes were created in April 1978 to provide more detail on the distribution of higher priced homes.

12. There is a modest degree of seasonal variation in reported selling prices. Sales prices tend to reach a seasonal peak in July, and then decline moderately over the next three months before experiencing a seasonal upturn. However, sales prices are *not seasonally adjusted.*

Seasonal Adjustment

13. Volume statistics are seasonally adjusted using the X-II Variant of the Census Method II Seasonal Adjustment Program of the Bureau of the Census. The procedure includes adjusting for trading-day variation—the number of Mondays, Tuesdays, etc., in a particular month. This type of fluctuation in the data was found to be significant.

14. Sales in each region are first seasonally adjusted and then aggregated to yield the U.S. statistic.

15. Seasonal indices are based on monthly single-family home sales activity dating from July 1966. New seasonal adjusters are constructed at the conclusion of each year. Past data are revised using these new seasonal factors and are published in the "Existing Home Sales Annual Report."

(March 1981)

Annual subscription price for 12 monthly issues and the "Existing Home Sales Annual Report" is $36 to members of the NATIONAL ASSOCIATION OF REALTORS ® and $48 to nonmembers.

Questions concerning this report should be directed to the **NATIONAL ASSOCIATION OF REALTORS ®**, Economics and Research Division, 777 14th Street, N.W., Washington, D.C. 20005 (202) 383-1000.

existing home sales

Home Sales in August

Record high mortgage interest rates are taking a terrible toll on the housing market. In August, sales of existing single-family homes slipped to their lowest level in more than six years. August home sales were at a seasonally adjusted annual rate of 2,260,000 units, off 10.3 percent from the preceding month and down 43.8 percent from the sales pace which was typical before this recession got underway.

The sharp August decline occurred after seven consecutive months in which sales appeared to have reached bottom and were holding within a narrow range of 2.49 to 2.66 million units. This further deterioration can be directly attributable to the continued problems posed by unaffordably high mortgage rates. Between late 1978, when the current housing recession first began, and August 1981 the monthly principal and interest payments for an 80 percent, 30 year mortgage on a median priced resale property more than doubled from $336 to $794. Of the $458 increase in monthly payments, higher mortgage rates caused $323 (71 percent) while higher home prices accounted for the remaning $135 (29 percent).

Monthly Payments for Principal and Interest on a Median Priced Existing Home (30 year term; 80 percent loan at prevailing rates)

	1974	1975	1976	1977	1978	1979	1980	Aug. 1981
Median Priced Home	$32,000	$35,300	$38,100	$42,900	$48,700	$55,700	$62,200	$68,400
Effective Interest Rate	9.27%	9.24%	9.07%	9.02%	9.78%	11.35%	14.02%	17.32%
Monthly Payments for Principal and Interest	$211	$232	$247	$277	$336	$436	$590	$794

Home Prices in August

Despite the dismally low level of home sales and high interest rates, housing prices have not broken under the market strain. In August, the median sales price of an existing home actually rose $900 to $68,400. However, the increase in home prices certainly lagged well behind the increase in the Consumer Price Index, and it appears certain that 1981 will be the first time in five years that home prices will increase at less than a double-digit pace.

Increases in Existing Home Prices and Consumer Prices (1974-1981)

	1974	1975	1976	1977	1978	1979	1980	Aug. 1981
Existing Home Prices	10.7%	10.3%	7.9%	12.6%	13.5%	14.4%	11.7%	5.4%
Consumer Price Index	11.0%	9.1%	5.8%	6.5%	7.7%	11.3%	13.5%	10.8%
